IFC+SG Onboarding Checklist

BIM Authoring Software and Features

Revit Users

S/N	TASK	REMARKS
1	Ensure that the latest Revit patch is installed.	Refer to link for details.
2	Ensure that the latest Revit interoperability tool is installed.	Refer to link for details.
3	Ensure that the Revit-IFC app is installed. For Revit 2025 users facing issues with activating the Revit-IFC dialogue box, uninstall the Revit-IFC app. (Refer to the link for details.)	Refer to link for details.
4	Ensure that the latest version of the Revit-IFC exporter is installed.	Refer to link for details.

Component Creation and IFC+SG Information Population

S/N	TASK	REMARKS
1	Study the IFC+SG regulatory requirements for the different gateways.	Refer to link for details on key gateways. Refer to link for details on COP.
2	Study the steps for preparing an IFC+SG model. Refer to the Glossary of Identified Components for additional information.	Refer to link for IFC+SG 101.
3	Ensure that you have downloaded the relevant IFC+SG toolkits and resource files.	Refer to link for details. Refer to link for IFC+SG excel mapping.
4	Use third-party applications to support the IFC+SG model preparation.	Refer to link for details.
5	Read through the Model Submission Good Practice Guide.	Refer to link for details.
6	Read through the Geo-Referencing and Coordination Across Disciplines Good Practice Guide	Refer to link for details.
7	Read through the Block and File Management Good Practice Guide	Refer to link for details.
8	Read through the MEP Services Good Practice Guide.	Refer to link for details.

9	Before submitting, review the exported federated IFC files. When using an IFC Viewer (BIMVision or BIMCollab Zoom), ensure that it is the latest build. (Note: Registration may be required, but both viewers are free.) Download BIMVision here. Download BIMCollab Zoom here. Essential Points for Model Quality: ➡️Ensure that IFC models can be federated together, as intended. ➡️Ensure that components are exported to the correct IFC entity, and subtyped with the relevant IFC+SG properties and property sets. ➡️Ensure that there is only one IfcSite per IFC file when exporting with linked files. ➡️ For Revit Users: In the Revit IFC exporter, select Additional Content>>Linked Files>>Export in the same IfcSite. ➡️Ensure that there are no unreferenced items by checking that all elements created in Revit are referenced to a level datum. • If you notice any unreferenced items, locate and resolve their referencing issues. • For Revit Users: If you encounter a warning while opening an IFC file in BIMVision, download the log and use the elementID (tag) or Global Unique Identifier (GUID) to locate the elements in Revit. ➡️Ensure that all level datums are aligned across models. Each datum must have a unique name and a unique associated GUID. To avoid confusion, datum names should also incorporate their GUIDs (with the same Finished Floor Level).	Refer to link for details.

CORENET X

CORENET X is a co-creation effort between the public agencies and industry to transform the regulatory landscape and practices through process re-engineering and adoption of technologies, redefining the Government to Business interactions. Developed using an agile approach, it will be implemented progressively and made available to the industry in phases.
